TECHNICAL SUMMARY

Systems-focused technology professional pursuing a career in infrastructure, platform engineering, and cyber-security. Developing hands-on experience with Linux, Python, SQL, networking, APIs, Docker, and systems architecture through projects emphasizing automation, observability, operational reliability, and secure system design.

EDUCATION

Arizona State University – Tempe, AZ
Bachelor of Science, Full-Stack Web Development

EXPERIENCE

New Age Air – HVAC Technician | 01/2023 – 11/2023

- Diagnosed and resolved mechanical and electrical system issues in residential HVAC systems
- Installed and configured thermostats and system components following technical specifications
- Performed preventative maintenance and system testing to ensure operational reliability
- Documented service actions and communicated technical issues to senior technicians and clients

UPMC Children's Hospital of Pittsburgh – Advanced Patient Care Technician | 01/2021 – 08/2021

- Operated and maintained patient monitoring devices: EKG systems and vital sign equipment
- Collected, recorded, and validated clinical data for accuracy in electronic medical record systems
- Performed clinical procedures including phlebotomy and wound care support
- Collaborated with multidisciplinary hospital teams in high-demand operational environments
- Supported continuity of care through structured documentation and procedural adherence

UPMC Shadyside Hospital – Patient Care Technician | 03/2020 – 01/2021

- Supported hospital operations through structured workflow execution and patient support services
- Maintained accurate records and ensured data integrity across clinical documentation systems
- Assisted clinical teams with operational tasks requiring precision, timing, and procedural compliance
- Functioned within coordinated team environments under time-sensitive and high-volume conditions

SKILLS

Python | SQL | JavaScript | HTML | CSS | Git | Linux/macOS | Command Line Interface (CLI) |
Basic Networking Concepts | System Documentation

PROJECTS

Web Development Portfolio Projects

HTML | CSS | JavaScript | Git | GitHub

- Developed multiple responsive web applications demonstrating front-end development principles
- Implemented structured layouts, navigation systems, and reusable design patterns
- Managed version control and project lifecycle through GitHub repositories

Hospital Transport Operations Platform (Senior Project)

Python | SQL | APIs | HTML | CSS | JavaScript

- Designing an operations platform to improve hospital patient transport workflows and reduce operational bottlenecks
- Developing process automation concepts informed by real-world healthcare operations experience
